

# SPEC MIATA RULES FOR VSCDA

VSCDA will now be accepting **SPEC** Mazda Miata's from 1990-1997 that raced with a pro-organization and meet their original **SPEC** Mazda rules set by SCCA in the years they were raced.

Car classes:	SM (1990-1993) 1.6l	SM2 (1994-1997) 1.8l
Car weight:	2,300	2,350 w/driver

All cars must provide documentation proving they did in fact race in a pro racing series with the proper specifications as required for spec Miata when they were raced. This will be the responsibility of the car owner to provide.

Cars that have been raced at Club racing or track day events are not considered a Professional racing series and will not be considered eligible to race with VSCDA.

Cars that have been modified in any way from the original pro racing specifications will not be allowed. Rules can be found in SCCA GCR under 9.1.8.

All Miata's racing without a fuel cell will be required to install a 5# **FIRE SYSTEM** with Driver, engine and fuel tank area coverage at a minimum. Fire bottle may also be securely mounted in the driver area at the owner's discretion.
